

**IN THIS EDITION:**

**SMAR's Support During Easter:**  
· Our support during the holidays

**New AzureProject Release:**  
· Learn about the numerous enhancements.

**We are moving to TEAMS:**  
· Learn how to contact us after Skype ceases.

**Our Trip to Thailand:**  
· SMAR Azure Returns to Rolly Tasker Sails in Phuket

*Happy Easter*

Wishing all our customers a joyful Easter! We will be taking a short break for the holidays on Friday 18th and Monday 21st April.

But don't worry, our customer support team will be back and ready to assist you from Tuesday 22nd April.

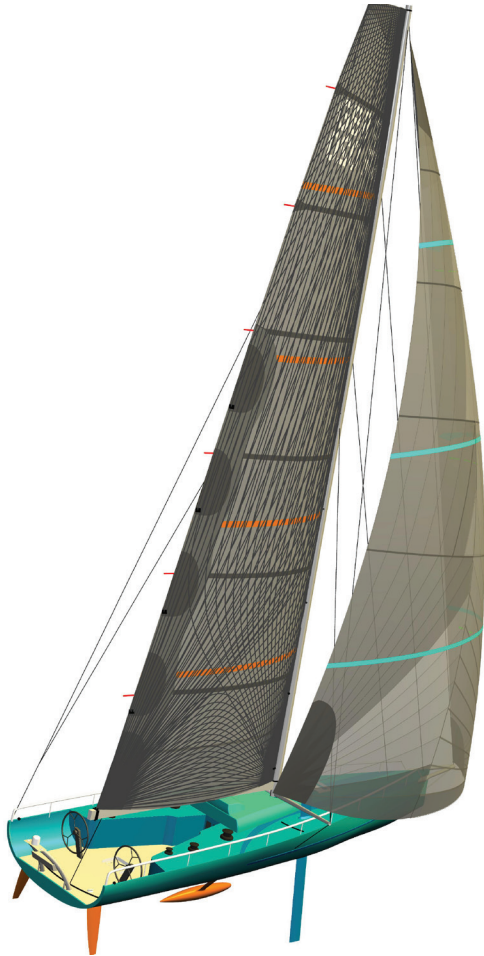

**AzureProject New Version Highlights**

We have been working behind the scenes to enhance your sail design experience! Here is a roundup of recent improvements and a newly implemented feature in AzureProject:

**New Feature**

**- Stack Patch Width from Outline:**

When designing the stack patches, it is now possible to choose between slicing from the patch outline or from the patch corner. This enables a different distribution of seams, according to the applied design principle.

**Now we improved:**

- **Radial Panels:** Corrected development of the tack panels on high-clew asymmetrics.
- **Cover Cuts by Width:** Improved accuracy and consistency.
- **Seam Location on Production Sheet:** Precise display of Forward, both, and English seams.
- **Mitre Cut Alignment:** Top zone panels align correctly with centreline.
- **Clew Panel Development on Metre Cut Layout:** Clew corners form correctly, even without "Shape on zone seams."
- **Bi-Radial Seam Allowance:** Corrected position.
- **Reef & Patch Marks:** Proper placement in bi-radial layouts.
- **Head Patch Limit:** Now appears at the correct angle.
- **Gaff Sail Luff Curves:** Accurately shaped from the luff edge.
- **2nd Ply UV Cover:** Cleaner panel development with "one edge straight" enabled.

**We're Moving to Microsoft Teams!**

As Skype will be ceasing in May 2025, we are transitioning to Microsoft Teams for our communication and support services.

**What does this mean for you?**

You will be switched automatically to Microsoft Teams, and if you have previously contacted us via Skype, all messages will transfer too — no action needed on your part.

**How to contact us?**

For any technical issues or questions, please email us at [support@smar-azure.com](mailto:support@smar-azure.com)

For any renewal or invoice relating questions email [admin@smar-azure.com](mailto:admin@smar-azure.com)

**SMAR Azure Returns to Rolly Tasker Sails in Phuket**

We recently delivered advanced SMAR Azure training at Rolly Tasker Sails in Phuket, where their team of four designers sharpened their skills on the latest features from sail surface generation to section management and design refinement.

With over 75,000 sails already designed using SMAR Azure, we are proud to support their continued growth and commitment to quality.

“ The training session with Francesco was great for us – helping us in our ongoing quest for ever higher quality in design using the SMAR Azure software... The new features of SMAR will certainly help to deliver even better sails, grow our company and our global market. Sven Cornelius, CEO Rolly Tasker Sails ”
